

EFA SD KIT

The "Super Deluxe" Sample Kit

EgideUK, formerly Europlus, manufactures the de-facto standard board-level fiberoptic organization accessories. Although their wide variety of accessories address most needs of the fiberoptic designer, a lack of familiarity with what is available can sometimes be a barrier to successful design. The **EFA SD KIT** effectively addresses this issue!

The **EFA SD KIT** contains 5 (or occasionally 3) samples of the most commonly-used organization accessories made by EgideUK, including mounting rivets and double-sided adhesive pads where appropriate. In this way the designer can become familiar with the products, as well as make trial designs for current projects. The benefits should be obvious.

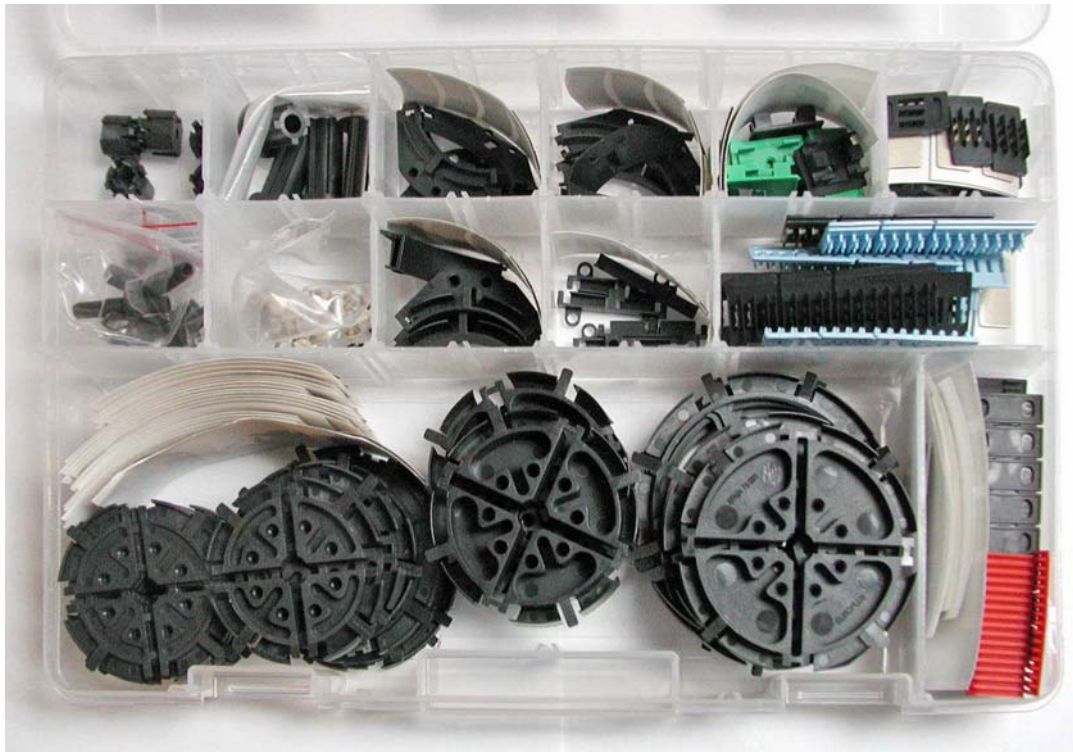

The price of the **EFA SD KIT** is approximately the same as the total cost for its contents. For an extra \$10 we can include an optional array tray for mounting device clips and routing fiber loops. The kit is available exclusive from Optimark Fiber Optics. (See next page for detailed contents of the kit.)
